Built-In Methods

Function	Description		
abs()	Returns the absolute value of a number		
all()	Returns True if all items in an iterable object are true		
any()	Returns True if any item in an iterable object is true		
ascii()	Returns a readable version of an object. Replaces none-ascii characters with escape character		
bin()	Returns the binary version of a number		
bool()	Returns the boolean value of the specified object		
bytearray()	Returns an array of bytes		
bytes()	Returns a bytes object		
callable()	Returns True if the specified object is callable, otherwise False		
chr()	Returns a character from the specified Unicode code.		
classmethod()	Converts a method into a class method		
compile()	Returns the specified source as an object, ready to be executed		
complex()	Returns a complex number		
delattr()	Deletes the specified attribute (property or method) from the specified object		
dict()	Returns a dictionary (Array)		
dir()	Returns a list of the specified object's properties and methods		
divmod()	Returns the quotient and the remainder when argument1 is divided by argument2		
enumerate()	Takes a collection (e.g. a tuple) and returns it as an enumerate object		
eval()	Evaluates and executes an expression		
exec()	Executes the specified code (or object)		
filter()	Use a filter function to exclude items in an iterable object		
float()	Returns a floating point number		
format()	Formats a specified value		
frozenset()	Returns a frozenset object		
getattr()	Returns the value of the specified attribute (property or method)		
globals()	Returns the current global symbol table as a dictionary		
hasattr()	Returns True if the specified object has the specified attribute (property/method)		
hash()	Returns the hash value of a specified object		

help()	Executes the built-in help system
hex()	Converts a number into a hexadecimal value
id()	Returns the id of an object
input()	Allowing user input
int()	Returns an integer number
isinstance()	Returns True if a specified object is an instance of a specified object
issubclass()	Returns True if a specified class is a subclass of a specified object
iter()	Returns an iterator object
len()	Returns the length of an object
list()	Returns a list
locals()	Returns an updated dictionary of the current local symbol table
map()	Returns the specified iterator with the specified function applied to each item
max()	Returns the largest item in an iterable
memoryview()	Returns a memory view object
min()	Returns the smallest item in an iterable
next()	Returns the next item in an iterable
object()	Returns a new object
oct()	Converts a number into an octal
open()	Opens a file and returns a file object
ord()	Convert an integer representing the Unicode of the specified character
pow()	Returns the value of x to the power of y
print()	Prints to the standard output device
property()	Gets, sets, deletes a property
range()	Returns a sequence of numbers, starting from 0 and increments by 1 (by default)
repr()	Returns a readable version of an object
reversed()	Returns a reversed iterator
round()	Rounds a numbers
set()	Returns a new set object
setattr()	Sets an attribute (property/method) of an object
slice()	Returns a slice object
sorted()	Returns a sorted list

staticmethod()	Converts a method into a static method	
str()	Returns a string object	
sum()	Sums the items of an iterator	
super()	Returns an object that represents the parent class	
tuple()	Returns a tuple	
type()	Returns the type of an object	
vars()	Returns thedict property of an object	
zip()	Returns an iterator, from two or more iterators	

String Methods

•	Converts the first character to upper case Converts string into lower case	
casefold()	-	
center() R	Returns a centered string	
count() R	Returns the number of times a specified value occurs in a string	
encode() R	Returns an encoded version of the string	
endswith() R	Returns true if the string ends with the specified value	
expandtabs() S	Sets the tab size of the string	
find() S	Searches the string for a specified value and returns the position of where it was found	
format() F	Formats specified values in a string	
format_map() F	Formats specified values in a string	
index() S	Searches the string for a specified value and returns the position of where it was found	
isalnum() R	Returns True if all characters in the string are alphanumeric	
isalpha() R	Returns True if all characters in the string are in the alphabet	
isascii() R	Returns True if all characters in the string are ascii characters	
isdecimal() R	Returns True if all characters in the string are decimals	
isdigit() R	Returns True if all characters in the string are digits	
isidentifier()	Returns True if the string is an identifier	
islower() R	Returns True if all characters in the string are lower case	
isnumeric()	Returns True if all characters in the string are numeric	
isprintable() R	Returns True if all characters in the string are printable	

isspace()	Returns True if all characters in the string are whitespaces	
istitle()	Returns True if the string follows the rules of a title	
isupper()	Returns True if all characters in the string are upper case	
join()	Converts the elements of an iterable into a string	
ljust()	Returns a left justified version of the string	
lower()	Converts a string into lower case	
lstrip()	Returns a left trim version of the string	
maketrans()	Returns a translation table to be used in translations	
partition()	Returns a tuple where the string is parted into three parts	
replace()	Returns a string where a specified value is replaced with a specified value	
rfind()	Searches the string for a specified value and returns the last position of where it was found	
rindex()	Searches the string for a specified value and returns the last position of where it was found	
rjust()	Returns a right justified version of the string	
rpartition()	Returns a tuple where the string is parted into three parts	
rsplit()	Splits the string at the specified separator, and returns a list	
rstrip()	Returns a right trim version of the string	
split()	Splits the string at the specified separator, and returns a list	
splitlines()	Splits the string at line breaks and returns a list	
startswith()	Returns true if the string starts with the specified value	
strip()	Returns a trimmed version of the string	
swapcase()	Swaps cases, lower case becomes upper case and vice versa	
title()	Converts the first character of each word to upper case	
translate()	Returns a translated string	
upper()	Converts a string into upper case	
zfill()	Fills the string with a specified number of 0 values at the beginning	

List/Array Methods

Method	Description	
append()	Adds an element at the end of the list	
clear()	Removes all the elements from the list	

copy()	Returns a copy of the list	
count()	Returns the number of elements with the specified value	
extend()	Add the elements of a list (or any iterable), to the end of the current list	
index()	Returns the index of the first element with the specified value	
insert()	Adds an element at the specified position	
pop()	Removes the element at the specified position	
remove()	Removes the first item with the specified value	
reverse()	everse() Reverses the order of the list	
sort()	Sorts the list	

Dictionary Methods

Method	Description	
clear()	Removes all the elements from the dictionary	
copy()	Returns a copy of the dictionary	
fromkeys()	Returns a dictionary with the specified keys and value	
get()	Returns the value of the specified key	
items()	Returns a list containing a tuple for each key value pair	
keys()	Returns a list containing the dictionary's keys	
pop()	Removes the element with the specified key	
popitem()	Removes the last inserted key-value pair	
setdefault()	Returns the value of the specified key. If the key does not exist: insert the key, with the specified value	
update()	Updates the dictionary with the specified key-value pairs	
values()	Returns a list of all the values in the dictionary	

Tuple Methods

Method	Description
count()	Returns the number of times a specified value occurs in a tuple
index()	Searches the tuple for a specified value and returns the position of where it was found

Set Methods

Description
)

add()	Adds an element to the set
clear()	Removes all the elements from the set
copy()	Returns a copy of the set
difference()	Returns a set containing the difference between two or more sets
difference_update()	Removes the items in this set that are also included in another, specified set
discard()	Remove the specified item
intersection()	Returns a set, that is the intersection of two or more sets
intersection_update()	Removes the items in this set that are not present in other, specified set(s)
isdisjoint()	Returns whether two sets have a intersection or not
issubset()	Returns whether another set contains this set or not
issuperset()	Returns whether this set contains another set or not
pop()	Removes an element from the set
remove()	Removes the specified element
symmetric_difference()	Returns a set with the symmetric differences of two sets
symmetric_difference_update()	inserts the symmetric differences from this set and another
union()	Return a set containing the union of sets
update()	Update the set with another set, or any other iterable

Files Methods

Method	Description	
close()	Closes the file	
detach()	Returns the separated raw stream from the buffer	
fileno()	Returns a number that represents the stream, from the operating system's perspective	
flush()	Flushes the internal buffer	
isatty()	Returns whether the file stream is interactive or not	
read()	Returns the file content	
readable()	Returns whether the file stream can be read or not	
readline()	Returns one line from the file	
readlines()	Returns a list of lines from the file	
seek()	Change the file position	

seekable()	Returns whether the file allows us to change the file position	
tell()	Returns the current file position	
truncate()	Resizes the file to a specified size	
writable()	Returns whether the file can be written to or not	
write()	Writes the specified string to the file	
writelines()	Writes a list of strings to the file	

Math module

Method	Description	
math.acos()	Returns the arc cosine of a number	
math.acosh()	Returns the inverse hyperbolic cosine of a number	
math.asin()	Returns the arc sine of a number	
math.asinh()	Returns the inverse hyperbolic sine of a number	
math.atan()	Returns the arc tangent of a number in radians	
math.atan2()	Returns the arc tangent of y/x in radians	
math.atanh()	Returns the inverse hyperbolic tangent of a number	
math.ceil()	Rounds a number up to the nearest integer	
math.comb()	Returns the number of ways to choose k items from n items without repetition and order	
math.copysign()	Returns a float consisting of the value of the first parameter and the sign of the second parameter	
math.cos()	Returns the cosine of a number	
math.cosh()	Returns the hyperbolic cosine of a number	
math.degrees()	Converts an angle from radians to degrees	
math.dist()	Returns the Euclidean distance between two points (p and q), where p and q are the coordinates of that point	
math.erf()	Returns the error function of a number	
math.erfc()	Returns the complementary error function of a number	
math.exp()	Returns E raised to the power of x	
math.expm1()	Returns E ^x - 1	
math.fabs()	Returns the absolute value of a number	
math.factorial()	Returns the factorial of a number	

math.floor()	Rounds a number down to the nearest integer		
math.fmod()	Returns the remainder of x/y		
math.frexp()	Returns the mantissa and the exponent, of a specified number		
math.fsum()	Returns the sum of all items in any iterable (tuples, arrays, lists, etc.)		
math.gamma()	Returns the gamma function at x		
math.gcd()	Returns the greatest common divisor of two integers		
math.hypot()	Returns the Euclidean norm		
math.isclose()	Checks whether two values are close to each other, or not		
math.isfinite()	Checks whether a number is finite or not		
math.isinf()	Checks whether a number is infinite or not		
math.isnan()	Checks whether a value is NaN (not a number) or not		
math.isqrt()	Rounds a square root number downwards to the nearest integer		
Returns the inverse of math.frexp() which is x * (2**i) of the g numbers x and i			
math.lgamma()	Returns the log gamma value of x		
math.log()	Returns the natural logarithm of a number, or the logarithm of number to base		
math.log10()	Returns the base-10 logarithm of x		
math.log1p()	Returns the natural logarithm of 1+x		
math.log2()	Returns the base-2 logarithm of x		
math.perm()	Returns the number of ways to choose k items from n items with order and without repetition		
math.pow()	Returns the value of x to the power of y		
math.prod()	Returns the product of all the elements in an iterable		
math.radians()	Converts a degree value into radians		
math.remainder()	Returns the closest value that can make numerator completely divisible by the denominator		
math.sin()	Returns the sine of a number		
math.sinh()	Returns the hyperbolic sine of a number		
math.sqrt()	Returns the square root of a number		
math.tan()	Returns the tangent of a number		
math.tanh()	Returns the hyperbolic tangent of a number		

math.trunc()

Returns the truncated integer parts of a number

Random Module

Method	Description		
seed()	Initialize the random number generator		
getstate()	Returns the current internal state of the random number generator		
setstate()	Restores the internal state of the random number generator		
getrandbits()	Returns a number representing the random bits		
randrange()	Returns a random number between the given range		
randint()	Returns a random number between the given range		
choice()	Returns a random element from the given sequence		
choices()	Returns a list with a random selection from the given sequence		
shuffle()	Takes a sequence and returns the sequence in a random order		
sample()	Returns a given sample of a sequence		
random()	Returns a random float number between 0 and 1		
uniform()	Returns a random float number between two given parameters		
triangular()	Returns a random float number between two given parameters, you can also set a mode parameter to specify the midpoint between the two other parameters		
betavariate()	Returns a random float number between 0 and 1 based on the Beta distribution (used in statistics)		
expovariate()	Returns a random float number based on the Exponential distribution (used in statistics)		
gammavariate()	Returns a random float number based on the Gamma distribution (used in statistics)		
gauss()	Returns a random float number based on the Gaussian distribution (used in probability theories)		
lognormvariate()	Returns a random float number based on a log-normal distribution (used in probability theories)		
normalvariate()	Returns a random float number based on the normal distribution (used in probability theories)		
vonmisesvariate()	Returns a random float number based on the von Mises distribution (used in directional statistics)		
paretovariate()	Returns a random float number based on the Pareto distribution (used in probability theories)		
weibullvariate()	Returns a random float number based on the Weibull distribution (used in statistics)		

RegEx module

The re module offers a set of functions that allows us to search a string for a match:

Function	Description		
findall	Returns a list containing all matches		
search	Returns a Match object if there is a match anywhere in the string		
split	Returns a list where the string has been split at each match		
sub	Replaces one or many matches with a string		

Metacharacters are characters with a special meaning:

Character	Character Description		Try it
0	A set of characters	"[a-m]"	Try it »
\	Signals a special sequence (can also be used to escape special characters)	"\d"	Try it »
	Any character (except newline character)	"heo"	Try it »
۸	Starts with	"^hello"	Try it »
\$	Ends with	"planet\$"	Try it »
*	Zero or more occurrences	"he.*o"	Try it »
+	One or more occurrences	"he.+o"	Try it »
?	Zero or one occurrences	"he.?o"	Try it »
{}	Exactly the specified number of occurrences	"he{2}o"	Try it »
	Either or	"falls stays"	Try it »
0	Capture and group		

Special Sequences

A special sequence is a \ followed by one of the characters in the list below, and has a special meaning:

Character	Description	Example	Try it »	
\A	Returns a match if the specified characters are at the beginning of the string	"\AThe"		
\b	Returns a match where the specified characters are at the beginning or at the end of a word (the "r" in the beginning is making sure that the string is being treated as a "raw string")		Try it » Try it »	

\B	Returns a match where the specified characters are present, but NOT at the beginning (or at the end) of a word (the "r" in the beginning is making sure that the string is being treated as a "raw string")	r"\Bain" r"ain\B"	Try it » Try it »
\d	Returns a match where the string contains digits (numbers from 0-9)	"\d"	Try it »
\D	Returns a match where the string DOES NOT contain digits	"\D"	Try it »
\s	Returns a match where the string contains a white space character	"\s"	Try it »
\\$	Returns a match where the string DOES NOT contain a white space character	"\S"	Try it »
\w	Returns a match where the string contains any word characters (characters from a to Z, digits from 0-9, and the underscore _ character)	"\w"	Try it »
\W	Returns a match where the string DOES NOT contain any word characters	"\W"	Try it »
\Z	Returns a match if the specified characters are at the end of the string	"Spain\Z"	Try it »

Sets

Set	Description	Try it
[arn]	Returns a match where one of the specified characters $(a, r, or n)$ are present	Try it »
[a-n]	Returns a match for any lower case character, alphabetically between a and ${\bf n}$	
[^arn]	Returns a match for any character EXCEPT a, r, and n Tr	
[0123]	Returns a match where any of the specified digits (0, 1, 2, or 3) are present	
[0-9]	Returns a match for any digit between 0 and 9	
[0-5][0-9]	Returns a match for any two-digit numbers from 00 and 59	
[a-zA-Z]	Returns a match for any character alphabetically between a and z, lower case OR upper case	
[+]	In sets, $+$, $*$, \cdot , $ $, (), $$$,{} has no special meaning, so [+] means: return a match for any $+$ character in the string	Try it »

Iterator

Iterator	Arguments	Results		Example
count()	start, [step]	start, start+step, start+2*step,		count(10)> 10 11 12 13 14
cycle()	р	p0, p1, pla	st, p0, p1,	cycle('ABCD')> A B C D A B C D
repeat()	elem [,n]	elem, elem, e n times	elem, endlessly or up to	repeat(10, 3)> 10 10 10
Iterator		Arguments	Results	Example
accumulate	()	p [,func]	p0, p0+p1, p0+p1+p2, 	accumulate([1,2,3,4,5])> 1 3 6 10 15
chain()		p, q,	p0, p1, plast, q0, q1, 	chain('ABC', 'DEF')> A B C D E F
chain.from_	_iterable()	iterable	p0, p1, plast, q0, q1, 	<pre>chain.from_iterable(['ABC', 'DEF'])> A B C D E F</pre>
compress()		data, selectors	(d[0] if s[0]), (d[1] if s[1]),	compress('ABCDEF', [1,0,1,0,1,1])> A C E F
dropwhile())	pred, seq	seq[n], seq[n+1], starting when pred fails	dropwhile(lambda x: x<5, [1,4,6,4,1])> 6 4 1
filterfalse	2()	pred, seq	elements of seq where pred(elem) is false	filterfalse(lambda x: x%2, range(10))> 0 2 4 6 8
groupby()		iterable[, key]	sub-iterators grouped by value of key(v)	

Iterator	Arguments	Results		Example
islice()	seq, [start,] stop [, step]	elements fr seq[start:st		islice('ABCDEFG', 2, None)> C D E F G
pairwise()	iterable	(p[0], p[1]),	(p[1], p[2])	pairwise('ABCDEFG')> AB BC CD DE EF FG
starmap()	func, seq	func(*seq[0 func(*seq[1		starmap(pow, [(2,5), (3,2), (10,3)])> 32 9 1000
takewhile()	pred, seq	seq[0], seq pred fails	[1], until	takewhile(lambda x: x<5, [1,4,6,4,1])> 1 4
tee()	it, n	it1, it2, it iterator into	n splits one o n	
<pre>zip_longest()</pre>	p, q,	(p[0], q[0]), 	(p[1], q[1]),	<pre>zip_longest('ABCD', 'xy', fillvalue='-')> Ax By C- D-</pre>
Iterator	,	Arguments	Results	
product()		o, q, [repeat=1]	cartesian p	product, equivalent to a nested for-
permutations()	į	o[, r]	r-length tu	uples, all possible orderings, no elements
combinations()	1	o, r	r-length tu	uples, in sorted order, no repeated
combinations_with_rep	placement() p	o, r	r-length tu	uples, in sorted order, with repeated

Examples	Results
<pre>product('ABCD', repeat=2)</pre>	AA AB AC AD BA BB BC BD CA CB CC CD DA DB DC DD
permutations('ABCD', 2)	AB AC AD BA BC BD CA CB CD DA DB DC
combinations('ABCD', 2)	AB AC AD BC BD CD
<pre>combinations_with_replacement('ABCD', 2)</pre>	AA AB AC AD BB BC BD CC CD DD
